

JOVANN CONTRERAS

Junior Software Engineer

✉ JovannJ.Contreras@gmail.com ☎ (209)670-5292 GitHub: <https://tinyurl.com/3kk4m6sz>  <https://www.linkedin.com/in/jovannj-c/>

PROJECTS

- AllForOne Project is a project that consist of different mini challenges to complete and was built in HTML and JavaScript and CSS. I created the backend that holds the information and data: <https://jcontreras3.github.io/ContrerasJAllForOneSprintDay2/>
- HamsterHotel is a project that I had follow with a certain format and make the format fully functioning and was built in HTML: <https://jcontreras3.github.io/ContrerasJHamsterHotel/>
- AdviceGenerator is a that was built in react with a given api to use. The api gave a random advice every time the button was pressed. This project was also built in React JavaScript: jovannadvicegenerator.azurewebsites.net
- A Budgeting app that was created with JavaScript, HTML and CSS. This app allows users to input their budget for and item and also their price range. The app then calculates the total of the price range and budget.: <https://jcontreras3.github.io/ContrerasJBudgetApp/>
- A pokemon search app that allows the user to search any pokemon of there liking. The application was built in React JavaScript and the api was fetched from a pokemon API: contrerasjovannpokedex.azurewebsites.net
